

Kompac Komplete

UV, Aqueous, Specialty Coatings & Primer

simplifying **the coating business**

- Complete Line of UV & Aqueous Coatings
- Available in 1 & 5 Gallon Pails
- Specialty Coatings (i.e. Silver/Gold Scratch off, Dry Erase & Glueable/Writable)
- Dedicated Coating Support & Solution
- One Stop Shopping for Coating & Supplies
- Knowledgeable & Friendly Customer Service
- Worldwide Distribution & Support

Made in USA

Applications

AQUEOUS COATING

Aqueous 1.2 Gloss - A medium gloss coating typically used to match the output of traditional offset presses.

Aqueous 4.2 Satin - A low gloss/neutral coating used when the original look of the printed material is desired. Offers very little color change or enhancement.

UV COATING

UV 2.0 Matte - A low viscosity, low gloss coating used for most digital and offset output when a Matte finish is desired.

UV 2.1 Gloss - Our thinnest viscosity, gloss coating used for most digital and offset output.

UV 2.2 High Gloss - A low viscosity, high gloss coating used for most digital and offset output.

UV 5.5 High Gloss - A medium viscosity, high gloss coating used for offset and some digital printed material.

UV 6.2 High Gloss - A thin viscosity, high gloss coating designed specifically for Konica Minolta, Canon & Océ output.

UV 6.5 Semi-Gloss - A low viscosity, medium gloss, heat resistant coating – which protects toner based products (such as Xerox) from rewetting in conditions over 120°.

UV 9.2 High Gloss - A low viscosity, high gloss coating designed for most digital and offset output.

UV 9.7 Satin - A medium viscosity, medium gloss coating used when reduced gloss or reduced finger printing is required.

UV 15.0 High Gloss - A high viscosity, high gloss coating designed for use with Xeikon output & very absorbent paper.

SPECIALTY COATING

Silver/Gold Scratch Off - A medium viscosity coating used to hide printing with the intent of scratching it to reveal a hidden message or prize. Must be applied after a UV gloss (releaser) has been applied to the same area.

Glueable / Writable - A medium viscosity, high gloss coating used when gluing or writing on the coated material is required.

Dry Erase - A medium viscosity coating that converts a standard piece of coated stock into a dry erase board.

*Many specialty coating applications require a spot plate.

PRIMER

Sapphire 3.2 - A medium strength, print receptive primer designed to pretreat HP Indigo substrate.

Sapphire 10.0 - A stronger, print receptive primer designed to pretreat HP Indigo substrate.

AQUEOUS COATING

- Aqueous 1.2 Gloss
- Aqueous 4.2 Satin

UV COATING

- UV 2.0 Matte
- UV 2.1 Gloss
- UV 2.2 High Gloss
- UV 5.5 High Gloss
- UV 6.2 High Gloss
- UV 6.5 Semi-Gloss
- UV 9.2 High Gloss
- UV 9.7 Satin
- UV 15.0 High Gloss

SPECIALTY COATING

- Silver Scratch Off
- Gold Scratch Off
- Glueable / Writable
- Dry Erase & More...

PRIMER

- Sapphire 3.2
- Sapphire 10.0
- Sapphire Indicator

COATING CLEANERS

- UV Klean
- Aque Klean
